SISTEMA

STAND-UP POUCH PACKAGING RE-ENGINEERED FROM THE GROUND UP.

SISTEMA

SMART INNOVATION.
SIMPLE TO RUN.
ENERGY EFFICIENT.
BUILT AROUND THE OPERATOR.

SISTEMA is a next-generation fully automatic packaging solution for the production of stand-up pouches.

SISTEMA redefines production flow management through an innovative architecture designed to optimize every stage of the forming, handling and filling process.

STEP BY STEP

- 1 The film is unwound from the reel under active tension control ensuring consistent material handling.
- 2 The forming unit shapes the flat film into a tubular structure with a pre-configured bottom profile.
- 3 The pouches are separated and transferred via a dedicated pick-and-place system to the electronic transport module.
- 4 Through the iTrack system, each stand-up pouch is individually controlled and conveyed across the different processing stations.

TECHNOLOGY HIGHLIGHTS

Full electronic cycle control

- ▶ for maximum precision and repeatability.

iTrack system

- ▶ for maximum flexibility.

Reduced energy consumption

- ▶ through an intelligent and efficiency-driven process design.

Lower mechanical stress on the film

- ▶ improving the quality of the bag.

Optimized accessibility

- ▶ for faster changeovers and simplified maintenance.

Intuitive operator interface

- ▶ designed for seamless and efficient operation.

BAG STYLES

Standard stand-up pouch

Resealable zipper stand-up pouch

Spouted stand-up pouch

Stand-up pouch with Euro hole

Stand-up pouch with tear notches

Custom pouches with functional perforations

Pouches with reinforced seals

Stand-up pouch with rounded or custom-shaped bottom
